

Science Class Field Trip/College Visit Survey

Below is a compiled list of comments I have received from my students as they reflected on the field trip to TMU. Students really appreciated your hospitality and for allowing them to experience many things.

1. What was the highlight of the trip for you at TMU?

I really enjoyed the lecture at the very end in Japanese. It was interesting to see how a large classroom setting works and I think it'll be helpful to know what its like in preparation for university. The interaction between the professor and the students was really interesting to see.

I was able to see a 3D visual of the fruit fly. I don't really see much 3D Biotechnology that is used in process.

To be actually be present in the lectures in the university was really interesting. There were many things that the professors taught that we learned in AP Biology class, so it was interesting to make connections between the lectures made and deepen my understanding of the subject.

The new technology, that we got to see, was very interesting since it is a rare opportunity to actually be able to see those machines (ex: DNA sequencer, observing the fly brain). Also knowing how it feels to be in a Japanese class was very new and interesting.

2. How did this field trip help you learn about the university and/or biological sciences?

The class itself was very interesting and engaging. I learned how it feels like to be in an actual college professor class

This field trip mainly helped me understand the Japanese university system in English, and how English speaking students can attend a Japanese university.

I can see from the lectures and the laboratories that biology is not just limited to the subject biology, but relates to chemistry and technology (machines) that brings further knowledge to the subject.

3. Thank You Notes to TMU Staff:

To the TMU staff- Thank you so much for having us and expending the time and effort to give us a taste of your school. It was a very educational experience and I was able to learn a lot. Thank you! -

The hospitality and enthusiasm of the staff really helped to make the experience feel important and worthwhile. I greatly appreciate the opportunity I was given to tour the university. -

To the TMU Staff, Thank you very much for giving us this generous opportunity to observe your new department and to better understand the workings of TMU's biology program in English. It was a very good experience and we appreciate the time and effort that you put into inviting us. -

Thank you for your time and service in which it helped us to understand the environment of your university. -

Thank you so much for having us!! I learned a lot and it was very enjoyable!! -

Thank you very much for inviting us to your college. It was a valuable experience for us to learn not only about sciences but our future as well. -

Thank you for letting us join your lectures. We look forward to see you again. -
